HEAD WALL FLASHING
WITH COUNTERFLASHING (Z BAR)

Framing Member
Required Vertical Wood Blocking
Rafter
Roof Deck
Slope for Positive Drainage
Exterior Wall Cladding
Weather Resistant Barrier or Cladding Underlayment
Counterflashing (see note 6)
Roof-to-Wall or Apron Flashing (Hemmed Edge Recommended)
Field Tile
Underlayment
Deck Flashing (Optional)
Batten

Note:
Openings at hips, ridges and head walls including chimneys, skylights, solar panels, and downslope horizontal abutments shall be fitted with weather blocking material to keep water on the surface of the field tile. Other methods approved by local building official will be allowed. See Technical Bulletin at www.tileroofing.org

Notes:
1. For recommended underlayment and fastening requirement, see Table 1A and 1B.
2. Underlayment shall extend a minimum of 4" up vertical wood blocking or wall.
3. Apron flashing or other roof-to-wall closure material is necessary at roof-to-wall intersections. Roof-to-wall/apron flashing should extend a minimum of 2" up vertical walls, and provide a minimum of 3" overlap/heading onto tile. The apron flashing is required to be overlapped a minimum of 2" by sheet metal counterflashing or wall cladding.
4. Solid wood blocking is required behind Z-metal counterflashing applications.
5. Dimensions shown are minimums and are intended to be approximate to allow for reasonable tolerances due to field conditions, and area practices.
6. The bottom edge of the counterflashing height settings shall be set above the roof deck a minimum of 4" for flat tile, 5" for low profile tile, and 6" for high profile tile.
7. All roof flashing shall be a minimum of (No. 26 galvanized sheet gauge) not less than 0.019 inch corrosion-resistant metal (G90). See Table a for additional options.

Drawing shown depicts the application of all tile profiles. Unless otherwise noted it would apply to either concrete or clay tiles.
