USA Owned. USA Made.

Eagle Roofing Products

American Made. American Owned.

Eagle Roofing Products is a division of Burlingame Industries, a California based privately held, family-owned organization that has been in the concrete roof industry for over 40 years.

From these family roots, our business philosophy and vision have blossomed.

Founded over 25 years ago by Robert Burlingame, Eagle began operations in the fall of 1989 with one high-pressure concrete tile extrusion machine. Today, Eagle's Rialto, California facility is the largest in North America. In addition to Rialto, we operate facilities in Phoenix, Arizona, as well as Stockton, California and Sumterville, Florida meeting the demand for concrete roof tile across the United States and Canada.

Our expertise, coupled by our extensive array of profiles and colors, enables us to provide our customers with high quality concrete roofing products that are aesthetically beautiful, durable and environmentally friendly.

Eagle's long experience in the roof tile industry and dedication to prompt personal response to its customers' needs have resulted in a well-deserved reputation for quality and service—a reputation that is unmatched.

Eagle is customer service.

SIMPLE. *elegant*. SOLUTIONS.
from a company you can trust

Eagle is Curb Appeal and Infinite Choices

- Choose from an extensive collection of profiles, textures and dimensions
- Vast color offering in standard integral, ranges and multi-color blends
- Flat tiles offer a crisp, clean appearance for Modern, Colonial, Craftsman, French Provincial and Tudor architecture
- High profile Barrel tiles are beautiful and timeless, ideal for Mediterranean architecture
- Medium/Roll tiles complements Modern architectural designs, in addition to large commercial or residential buildings
- Concrete tile is the ideal alternative to slate, wood, stone coated metal, and asphalt roofing materials
- Tile roofs enhance curb appeal and maintains the value of the structure over time

Eagle is Peace of Mind

- USA Made. USA Owned.
- Best warranty in the industry
- Our weight is our strength - APPROX. 10 LBS. PER SQ. FT. INSTALLED
- Our tile is tested to the highest standards in the industry for fire, high-wind, seismic forces, and freeze-thaw protection
- Our customer service, sales and technical department are here for you before, during and after the sale
- Our products are affordable and environmentally friendly

Tile Roofing Is Simply...

New Construction • Reroof • Residential

Tile. Sustainable, aesthetically superior protection.

Asphalt Shingle. Temporary, basic roof covering.

HOW DOES TILE COMPARE TO ASPHALT SHINGLES?

- Real tile roofs are no longer only “round and red”. Tile roofs are available in a variety of profiles and colors.
- Tile roofs are produced from ALL natural products - concrete or clay.
 - Tile roofs are not plastic, resin, rubber or metal.
 - Tile roofs do not warp, rust or bend.
- Tile roofs are heavier than asphalt shingles. Weight equates to longevity, thermal superiority, weather, impact resistance and much more.
- Tile roofs invite extreme weather conditions, while asphalt shingle manufacturers base their sales projections on how many of their roofs will need replacing every year.
 - Tile can withstand sustained winds of up to 180mph
 - Class A Fire Rated
 - Impact Resistant
 - Freeze-Thaw
- Asphalt shingles are not distinctive.
- Asphalt shingles are not environmentally friendly, as they are a petroleum based product and fill landfills.
- Asphalt shingles do not perform well in hail storms. Roofers swarm neighborhoods subjected to the slightest hail storm.
- Synthetics and plastic products lack a proven track record as a long-lasting and durable roofing product.
- Asphalt shingles are easily damaged by high winds, especially after they age, dry out, lose granules and crack.
- Shingles are not resistant to extreme temperature variations, lending to cracking and loss of color, as they are dependent on granules that are temporarily adhered to the shingle.

The Superior Choice

Commercial • H.O.A.'s • Municipal Buildings

THINGS TO CONSIDER WHEN SPECIFYING A TILE ROOF

A Natural Lifetime Product

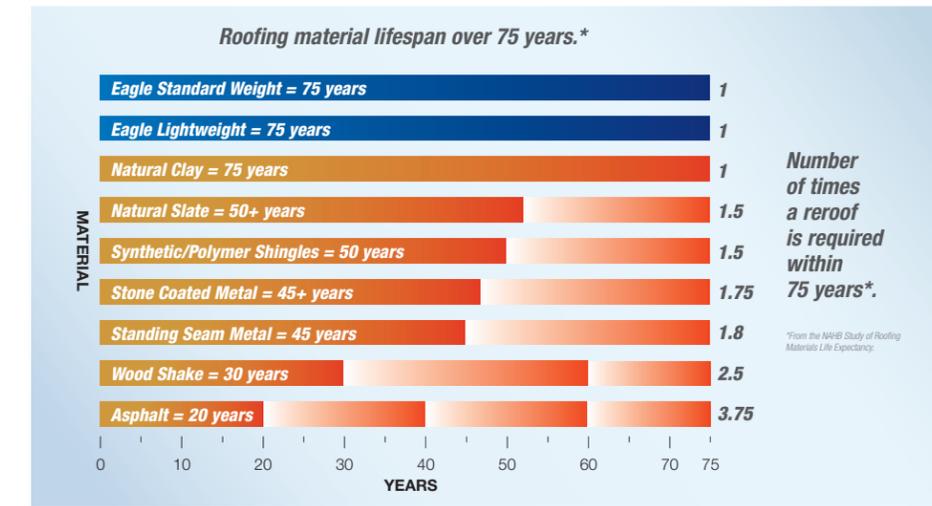

Don't want to replace your roof every 10-20 years? Consider a lifetime roof with proven performance. Tile lasts for generations with the lowest lifecycle cost of any roofing material on the market.

- Economical, better value
- Proven durable performance
- Minimal maintenance

Environmentally Responsible Choice

No gimmicks, tile is the real deal. Locally sourced raw materials and low-energy manufacturing, tile is crafted from natural minerals for performance and function as nature intended it to be.

- Sustainable
- 100% Recyclable
- Recycled content (blast furnace slag, reclaimed clay aggregate)

Building Energy Calculation Recognized

Thermal mass is the ability of a material to maintain a more consistent temperature. Tile has a high thermal mass that effectively helps to make the building more comfortable and reduce peak energy demands. Custom and Production Home Builders across the country are using the HERS Index to sell their homes. Recently, REM/Rate v12.93 incorporated the energy benefit of tile roofing into building envelope calculations. This revision has the potential to improve HERS rating scores on homes by upgrading to a tile roof.

Inherently Green Product

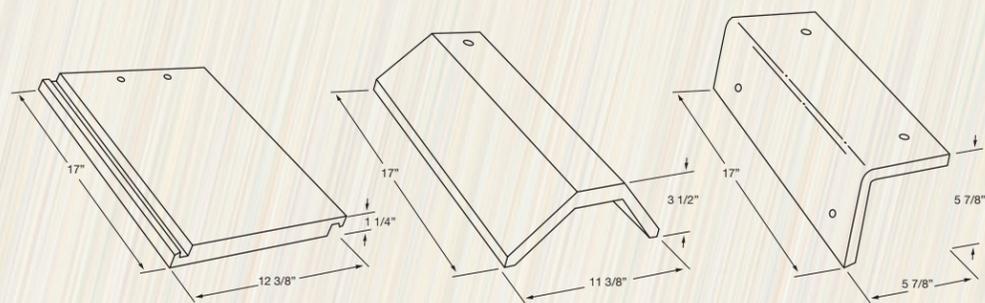

Eagle Roofing Products offers a range of ENERGY STAR and Cool Roof Rating Council (CRRC) approved tiles ideal for green building projects that can contribute to LEED® credits as well. These Cool Roof Tiles are made from highly reflective, highly emissive materials that stay 50 to 60 degrees cooler than a standard roof under a hot summer sun. They also help reduce heat island effects and production of CO2 emissions.

Eagle can arrange training for contractors. We recommend that all Concrete Tile Roofs be installed by a Tile Roofing Institute Certified Installer.

Staggered Installation

Installing flat tile with a staggered exposure is an easy way to give a home an "Old World" look. While staggered exposure tiles are a natural fit for architectural styles like English Cottage and French Country, this unique look can breathe new life into homes of many varied styles. To some professional roofing contractors, creating a unique staggered exposure tile roof can seem daunting. The truth is that it is really quite simple. It just requires planning.

The first thing a professional roofing contractor must consider is waste. It is important to note that approximately half of the tiles on a staggered roof will have a shorter exposure than the other half. It will be essential to calculate the additional tiles required to create a unique staggered exposure roof prior to ordering product. Whether installing a staggered exposure tile roof with battens or without, it is imperative to make proper measurements when preparing the roof for installation. The first course at the eave will be installed normally with a standard exposure. The staggered exposure begins at the second course.

It is vitally important the professional roofing contractor plans the entire roof layout prior to installing tiles. If battens are utilized, the staggered exposure is achieved by installing partial battens (no greater than 12" in length) immediately above the primary course battens beginning on the second course. The tiles with the shorter exposure will hang on the higher partial batten (see image). If a direct to deck application is utilized (no battens), a second set of chalk lines will be marked at each course, one line for the normal exposure and one for the staggered exposure tiles.

One more consideration is the water channel at the left side of the tile. The bottom of the water channel of the tiles with a normal exposure will be visible. Leaving this portion of the water channel exposed can detract from the desired look of the staggered roof, especially on steeper roof pitches where a majority of the face of each tile will be visible. If desired, exposed channel can be removed. There are several ways to achieve this using a combination of saws and tile nippers.

In the end, you can rest assured that flat tile with a staggered exposure will create an overall beautiful, unique look to your project.

Signature Blends of Blends

Set yourself apart from the rest by adding beauty and distinction to your roof when you choose one of our custom color creations. The Signature Blends of Blends line emulates the classic look of real clay tiles with natural color blends that allow greater flexibility in creating the most traditional to the most contemporary of roof designs. A handcrafted work of art, we encourage you to go ahead and explore the possibilities.

Achieving the Signature Blends of Blends Appearance

Please note that the tile blends featured are examples and these colors may not be available in your area.

To create your own Signature Blends of Blends look, we encourage you to contact your local Eagle Account Representative that can assist you in this process. Signature Blends of Blends do not come pre-packaged or blended in the pallet and are to be purchased separately. Eagle Roofing Products recommends that you discuss the design effect and percentage of each color with your Roofer, prior to installation, to ensure that you achieve the desired look and that no hot spots (patches of color that undo the blended effect) are created. Your Roof Contractor is responsible for blending the colors during the loading of roof in order to create the Signature Blends of Blends, ensuring that the placement of the tile is completed in an aesthetically pleasing manner.

Boosted Accessory Pieces

It's easy to create the beauty of an authentic mortar-boosted clay roof with our Boosted accessory piece. These individual Boosted pieces are available in a wide range of colors intended to create a rustic look. Simply select from any of our Boosted colors to complement your Capistrano tile. For best results, mix your Boosted color and base color as this will add to the authenticity of your roof.

Choose a Boosted accessory piece to go with your base field tile. Then decide how much "Boost" to use and how you would like your mortar to look. Some prefer a neat treatment, while others like an authentic look. No matter your choice, your new Boosted Eagle roof will be beautiful for years to come.

% used on roof	Approx installed weight field tile per 100 sq ft
10% Application	968
20% Application	1056
30% Application	1144

Each Boosted piece weighs approximately 4.8 lbs.

Boosted Wind Clips or Foam Should Be Used.
