Creating a Greener California

2013 California Title 24, Part 6 Requirements — Understanding How It Affects You

California's Title 24 energy standards address the energy efficiency of new construction of, and additions and alterations to, homes and commercial buildings. Since buildings are one of the major contributors to electricity demand, the goal of Title 24 is to reduce energy consumption in California for its energy future.

Effective July 1, 2014, the Title 24 Roofing Code establishes new requirements to promote the installation of “Cool Roofs” in Low Rise Residential Steep Slope Construction. Cool Roofs are roofs consisting of materials that reflect the sun's energy from the roof surface, as well as have high emissivity, allowing them to emit infrared energy. Thus, significantly reducing energy costs and urban heat islands.

Eagle Roofing Products is committed to adhering to the California Energy Commission's energy standards by providing our Customers with Cool Roof concrete tile solutions that not only meet the new requirements, but deliver the beauty, durability and value that you've come to expect.

How does Title 24 Impact You?

- **Builders:** All new permits and buildings must comply
- **Architects:** Must plan for the new energy efficiency requirements
- **Roofers:** Can differentiate by knowing the new code

Cool Roof Criteria

California is divided into 16 climate zones. Buildings located in Climate Zones 10 -15 need to meet, at a minimum, the following requirement as outlined by the California Energy Commission (CEC).

- Aged Solar Reflectance Index of 16

Requirements vary by zone, depending on the building and the climate method. [See map on opposite page]

To see which climate zone your project is in and the requirements associated with your building structure, visit the CEC's website:

www.energy.ca.gov/maps/renewable/building_climate_zones.html

Re-Roof and Alterations

In Climate Zones 10-15, when 50% or more of the roof is being replaced, the Prescriptive Method must be used to meet cool roof requirements, except when:

- Re-roof alterations are less than 50% of the existing roof
- Home addition has less than 300 square feet of roofing
- Minimum R38 attic insulation is used
- Minimum R4 above deck insulation is used
- There is no duct work in attic or duct insulation meets new requirements
- High profile tile is used (rise to width ratio of 1:5 when installed)
- Elevated battens are used

New Construction

For new construction, the Performance Method, where you use the California Energy Commission's approved software to demonstrate compliance for the entire building is the preferred path.

- A total building energy budget is established
- Solar Reflectance and Thermal Emittance of chosen product are entered into the software
- Trade-offs are allowed (i.e. higher efficiency windows, HVAC, etc)
- Any profile or color can be used as long as the energy budget is met

Title 24 Requirements

Index of Title 24 Products

For a quick reference of our Title 24 compliant products, refer to the product index table below.
Also look for our **T24** indicator on the product pages.

The numbers in red, represent a calculated (estimated) 3 year (aged) solar reflectance index, whereas, the standard color number represents an actual 3 year tested solar reflectance index.

Signature Blends of Blends

Set yourself apart from the rest by adding beauty and distinction to your roof when you choose one of our custom color creations. The Signature Blends of Blends line emulates the classic look of real clay tiles with natural color blends that allow greater flexibility in creating the most traditional to the most contemporary of roof designs. A handcrafted work of art, we encourage you to go ahead and explore the possibilities.

Achieving the Signature Blends of Blends Appearance

Please note that the tile blends featured do not come pre-packaged or blended in the pallet and are to be purchased separately. The percentage noted on the Signature Blends of Blends are suggestions and Eagle Roofing Products recommends that you discuss the design effect with your Roofer, prior to installation, to ensure that you achieve the desired look and that no hot spots (patches of color that undo the blended effect) are created. Your Roof Contractor is responsible for blending the colors during the loading of roof in order to create the Signature Blends of Blends, ensuring that the placement of the tile is completed in an aesthetically pleasing manner.

Boosted Accessory Pieces

It's easy to create the beauty of an authentic mortar-boosted clay roof with our Boosted accessory piece. These individual Boosted pieces are available in a wide range of colors intended to create a rustic look. Simply select from any of our Boosted colors to complement your Capistrano tile. For best results, mix your Boosted color and base color as this will add to the authenticity of your roof.

Choose a Boosted accessory piece to go with your base field tile. Then decide how much “Boost” to use and how you would like your mortar to look. Some prefer a neat treatment, while others like an authentic look. No matter your choice, your new Boosted Eagle roof will be beautiful for years to come.

% used on roof	Approx installed weight field tile per 100 sq ft
10% Application	990
20% Application	1080
30% Application	1170

Each Boosted piece weighs approximately 4.8 lbs.

**Boosted Wind Clips Included
