Lightweight Products For The Reroof Market

SIMPLE. elegant. SOLUTIONS. from a company you can trust

Eagle is Curb Appeal and Infinite Choices

- · Choose from an extensive collection of profiles, textures and dimensions
- · Vast color offering in standard integral, ranges and multi-color blends
- · Flat tiles offer a crisp, clean appearance for Modern, Colonial, Craftsman, French Provincial and Tudor architecture
- High profile Barrel tiles are beautiful and timeless, ideal for Mediterranean architecture
- · Medium profile tiles complement Modern architectural designs, in addition to large commercial or residential buildings
- · Concrete tile is the ideal alternative to slate, wood, stone coated metal, and asphalt roofing materials
- · Tile roofs enhance curb appeal and maintain the value of the structure over time

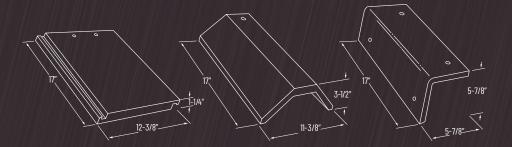

Eagle is Peace of Mind

- USA Owned. USA Made.
- · Best warranty in the industry
- · Our tile is tested to the highest standards in the industry for fire, high-wind and freeze-thaw protection*
- Our customer service, sales and technical departments are here for you before, during and after the sale
- Our products are affordable and environmentally friendly

*Excludes color bonded/slurry tiles.

Flat Profiles

Limitless options without compromise, Eagle's Flat Tile profiles offer graceful beauty, rugged strength and enhanced curb appeal. Available in a vast array of colors from warm earth tones and cool grays to refreshing natural hues ranging from green to eggplant—its crisp appearance complements both traditional and modern architecture. Depending on the look you are after, our Flat Tiles can emulate the texture and style of natural materials such as wood shake, clay and slate – and are a more affordable alternative. See for yourself.

Concrete roof tile never looked so good.

720 Pounds (approx.)

Sometimes, the beauty is in the simplicity of the design. The Bel Air profile is a flat, smooth tile that offers clean lines and versatility to use on a variety of different architectural styles. Plus, it allows you to go heavier on other exterior elements such as pavers, stonework and landscaping, all of which will dramatically complement your Bel Air concrete tile roof. The choices are endless!

Staggered Installation

Installing flat tile with a staggered exposure is an easy way to give a home an "Old World" look. While staggered exposure tiles are a natural fit for architectural styles like English Cottage and French Country, this unique look can breathe new life into homes of many varied styles.

It is vitally important that the professional roofing contractor plans the entire roof layout prior to installing tiles, taking into consideration the weight and waste. Approximately half of the tiles on a staggered roof will have a shorter exposure than the other half. It will be essential to calculate the additional tiles required to create a unique staggered exposure roof prior to ordering product. Whether installing a staggered exposure tile roof with battens or without, it is imperative to make proper measurements when preparing the roof for installation. The first course at the eave will be installed normally with a standard exposure. The staggered exposure begins at the second course.

If battens are utilized, the staggered exposure is achieved by installing partial battens (no greater than 12" in length) immediately above the primary course battens beginning on the second course (as seen in upper inset illustration). The tiles with the shorter exposure will hang on the higher partial batten (see image). If a direct-to-deck application is utilized (no battens), a second set of chalk lines will be marked at each course, one line for the normal exposure and one for the staggered exposure tiles. This is based on a 1" stagger.

One more consideration is the water channel at the left side of the tile. The bottom of the water channel will be visible. Leaving this portion of the water channel exposed can detract from the desired look of the staggered roof, especially on steeper roof pitches where a majority of the face of each tile will be visible. If desired, exposed channel can be removed using a saw and/or tile nippers (as seen in lower inset illustration).

In the end, you can rest assured that flat tile with a staggered exposure will create an overall beautiful, unique look to your project.

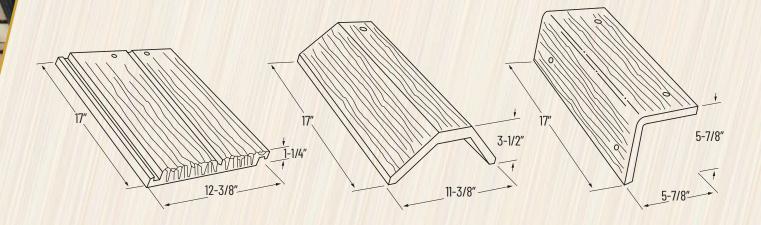

Please note that although aesthetically stunning, staggered installations are extremely complicated and may cause layout and waterproofing complications. Your Roofing Contractor is ultimately responsible for the planning and proper installation of the tile.

Double Eagle Ponderosa

PER 100 **88.5** Tiles (3" headlap) SQ FT **720** Pounds (approx.)

If you are seeking the aesthetics of hand split cedar shake, then Double Eagle Ponderosa is for you! This tile will create a dramatic, classic look that will enhance the appearance of any residential or commercial property while providing you with the durability, sustainability and beauty you desire.

Barrel Profiles

Inspiration that will move you... Eagle's high and medium barrel shaped profiles exude rich colors, unmatched aesthetics and timeless elegance. Whether you are looking to emulate the authentic look of Spanish tile in the Old World or wish for a more contemporary style while mirroring the Mediterranean appearance found in the roofscapes of Italy, France and Greece; you can rest assured that your curb appeal will be the envy of everyone in your neighborhood.

88.5 Tiles (3" headlap)570 Pounds (approx.)

A high S-profile tile, our Capistrano is semi-cylindrical and is the most traditionally recognized of all tile profiles. While you may think a Capistrano tile roof is suitable for only Spanish or Italian architecture, it actually offers stunning good looks that work well with any style, as it pairs nicely with stucco, stone or brick siding. It is used widely on residential, commercial, military and institutional buildings throughout the United States.

Boosted Capistrano Accessories

Seeking the genuine look of old Spanish tile without the premium cost of a clay roof? Realize your vision with Eagle's Boosted Capistrano. Your home will dazzle with rustic touches of Old World charm that bring the genuine look of natural clay to life. All this with the peace of mind that your concrete tile roof is designed to last the life of your structure, while adding undeniable character to your exterior space.

Boosted Capistrano Accessories

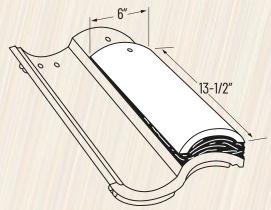

It's easy to create the beauty of an authentic mortar-boosted clay roof with our Boosted Capistrano accessory pieces. Available in a wide range of colors, these pieces were designed to complement your Capistrano tile. For best results, mix your Boosted color and base color as this will add to the authenticity of your roof.

Considerations:

- Choose a Boosted accessory piece to go with your base tile. For color options, please contact an Eagle Account Representative.
- Decide on the look that you want. Prefer a neater treatment? Want a more authentic look?
- · Decide how much boost you would like.

No matter what type of Boosted application you choose, your new Eagle Boosted Capistrano roof will be sure to impress.

About Title 24

California's Title 24 energy standards address the energy efficiency of new construction of, and additions and alterations to, homes and commercial buildings. Since buildings are one of the major contributors to electricity demand, the goal of Title 24 is to reduce energy consumption in California for its energy future.

Creating a Greener California

California Title 24, Understanding How It Affects You

The Title 24 Roofing Code establishes new requirements to promote the installation of Cool Roofs in Steep Slope Construction. Cool Roofs are roofs designed to reflect more sunlight and absorb less heat than a standard roof, and need to meet or exceed the .20 requirement for Aged REF. Thus, significantly reducing energy costs and urban heat islands.

Eagle Roofing Products is committed to adhering to the California Energy Commission's energy standards by providing our Customers with Cool Roof concrete tile solutions that not only meet the new requirements, but deliver the beauty, durability and value that you've come to expect.

How does Title 24 Impact You?

- · Builders: All new permits and buildings must comply
- Architects: Must plan for the new energy efficiency requirements
- · Roofers: Can differentiate by knowing the new code

Cool Roof Criteria

California is divided into 16 climate zones. Buildings located in Climate Zones 10 -15 need to meet, at a minimum, the following requirement as outlined by the California Energy Commission (CEC).

· Aged Solar Reflectance Index of .20 or a minimum SRI, A.SRI of .16

Requirements vary by zone, depending on the building and the climate method. To see which climate zone your project is in and the requirements associated with your building structure, visit the CEC's website.

Re-Roof and Alterations

In Climate Zones 10-15, when 50% or more of the roof is being replaced, the Prescriptive Method must be used to meet cool roof requirements, except when:

- · Home addition has less than 300 square feet of roofing
- Roof of attic spaces has a radiant barrier according to 150.1©2
- · There is a greater than R-20 insulation above the roof deck
- Existing ducts in the attic are insulated and sealed according to 150.1©9
- · There is no duct work in the attic space
- High profile tile is used (rise to width ratio of 1:5 when installed)
- · Elevated battens are used to increase air space
- Building has at least a R-38 roof/ceiling insulation

New Construction

For new construction, the Performance Method, where you use the California Energy Commission's approved software to demonstrate compliance for the entire building, except when one of the following occurs, this is the preferred path.

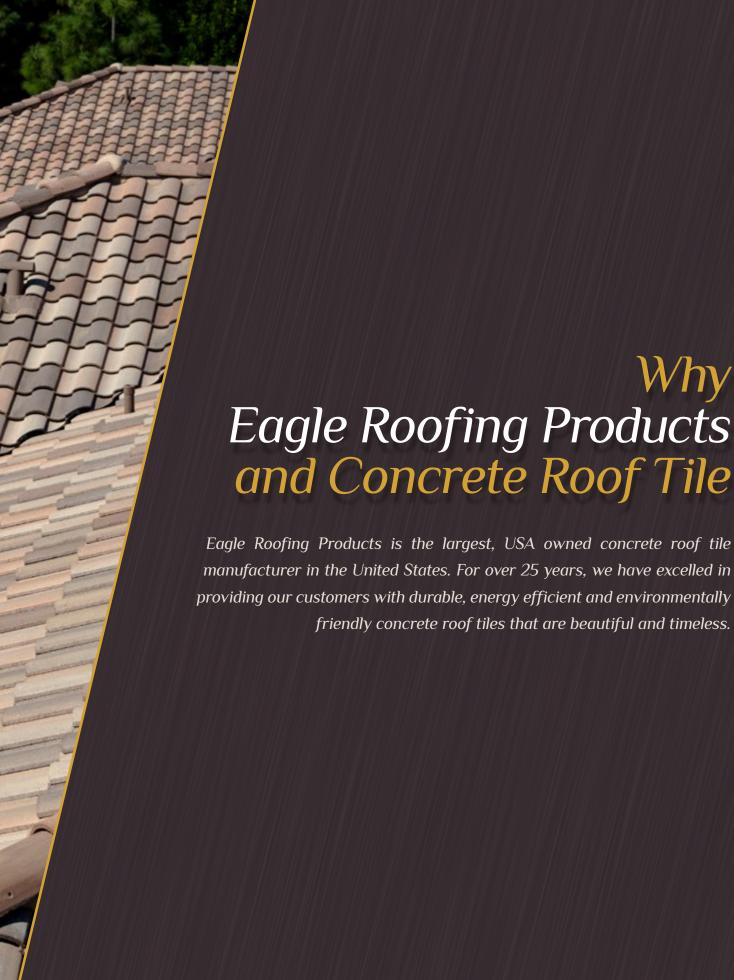

- A total building energy budget is established
- · Initial or Aged Solar Reflectance/Thermal Emittance of chosen product are entered into the software
- Trade-offs are allowed (i.e. higher efficiency windows, HVAC, etc)
- · Any profile or color can be used as long as the energy budget is met

Requirements vary by zone, depending on the building and the climate method. [See map on opposite page] To see which climate zone your project is in and the requirements associated with your building structure, visit the CEC's website: energy.ca.gov/maps/renewable/building_climate_zones.html

Look for our T24 indicator on the product pages to see which ones qualify for Title 24.

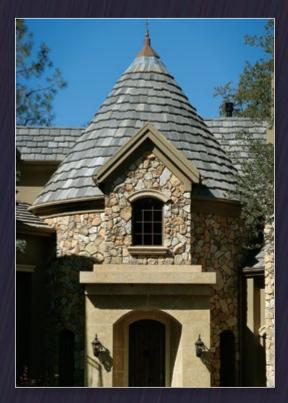

Eagle Roofing Products

Whether you are building a new home or re-roofing your existing one, your home deserves the best roof possible. When you choose Eagle concrete tile, you'll get a roof that is aesthetically stunning, durable and sustainable.

Founded over 25 years ago by Robert Burlingame, Eagle began operations in the fall of 1989 with one high-pressure concrete tile extrusion machine. Today, Eagle's Rialto, California facility is the largest in North America. In addition to Rialto, we operate facilities in Phoenix, Arizona as well as Stockton, California and Sumterville, Florida meeting the demand for concrete roof tile across the United States and Canada.

Our expertise, coupled with our extensive array of profiles and colors, enables us to provide our customers with high quality concrete roofing products that are beautiful, long-lasting and environmentally friendly.

Eagle's long experience in the roof tile industry and dedication to prompt personal response to its customers' needs have resulted in a well-deserved reputation for quality and service— a reputation that is unmatched.

Eagle is customer service.

Unsurpassed Beauty, Strength and Longevity

When you choose a concrete tile roof from Eagle Roofing Products, you are choosing years of protection and peace of mind. Our tile is tested to the highest standards of the industry. A properly installed Eagle Tile Roof will withstand the elements through rain, snow, high wind and scorching heat – outperforming all other roofing products, while remaining aesthetically stunning.

Fire Tested - Eagle Roof Tile is a Class A roof covering that will protect your home and personal property.

High Wind Tested -

Installed correctly, Eagle Roof Tile can survive the strongest storms and harshest weather. Eagle tile is tested and approved

for use in the Miami Dade high velocity hurricane zone, withstanding sustained winds of up to 180mph.

Hail/Impact Tested* - Concrete roof tile stands up to hail, as well as or better than, any other roofing product. Some insurance companies offer discounted

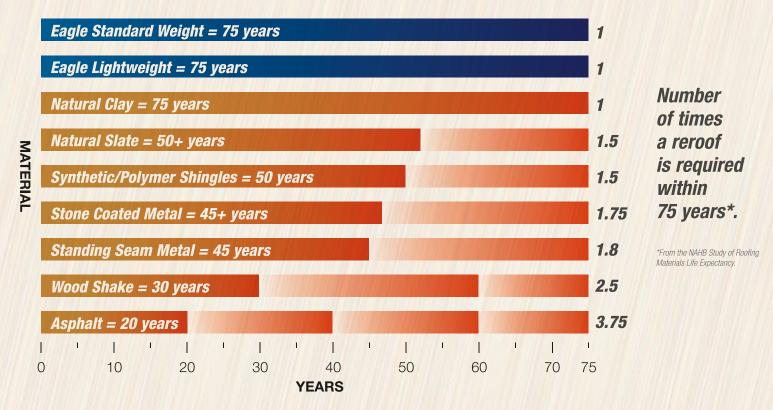

premiums for houses with tile roofs because of its impact resistance. *Arizona and Florida manufactured tiles only.

*Freeze Thaw Protection -

Eagle Roof Tile passes Freeze-Thaw requirements. *Excludes color bonded/slurry tiles.

Roofing material lifespan over 75 years.*

Tile Roofing Is Simply The Superior Choice

New Construction · Reroof · Residential · Commercial

Tile. Sustainable, aesthetically superior protection.

Asphalt Shingle. Temporary, basic roof covering.

HOW DOES TILE COMPARE TO ASPHALT SHINGLES?

- Real tile roofs are no longer only "round and red".

 Tile roofs are available in a variety of profiles and colors.
- Tile roofs are produced from ALL natural products concrete or clay.
 - Tile roofs are not plastic, resin, rubber or metal.
 - Tile roofs do not warp, rust or bend.
- Tile roofs are heavier than asphalt shingles.
 Weight equates to longevity, thermal superiority, weather, impact resistance and much more.
- Tile roofs invite extreme weather conditions, while asphalt shingle manufacturers base their sales projections on how many of their roofs will need replacing every year.
 - Tile can withstand sustained winds of up to 180mph*
 - Class A Roof Covering
 - Freeze-Thaw (Excludes color bonded/slurry tiles)

- · Asphalt shingles are not distinctive.
- Asphalt shingles are not environmentally friendly, as they are a petroleum based product and fill landfills.
- Asphalt shingles do not perform well in hail storms. Roofers swarm neighborhoods subjected to the slightest hail storm.
- Synthetics and plastic products lack a proven track record as a long-lasting and durable roofing product.
- Asphalt shingles are easily damaged by high winds, especially after they age, dry out, lose granules and crack.
- Shingles are not resistant to extreme temperature variations, lending to cracking and loss of color, as they are dependent on granules that are temporarily adhered to the shingle.

Committed to your Trust and Satisfaction

IAPMO ER #1900

Specifying Eagle

Every effort has been made to provide you with the tools you need to specify Eagle on your next residential or commercial project. You can find these tools on our website at www.eagleroofing.com under the main tab Resources – Design Professionals.

Installation

Eagle recommends that you find a licensed and insured Roofer for all of your roofing needs. Detailed installation recommendations can be found in the *Concrete and Clay Roof Tile Installation Manual (July 2015)* published by the Tile Roofing Institute & Western States Roofing Contractor Association. For further information, please visit: www.tileroofing.org

Blended Tile

Blended tile provides added value and beauty to any architectural structure. However, it requires careful placement by your Roofing Contractor, who is responsible for ensuring that the placement of the tile is completed in an aesthetically pleasing manner. Eagle Roofing Products recommends that you discuss this design effect with your Roofer, prior to installation, to ensure that no hot spots (patches of color that undo the blended effect) are created.

Warranty

As the largest USA Owned, USA Made concrete roof tile manufacturer, Eagle Roofing Products proudly stands behind its products with a Lifetime Transferable Limited Product Warranty. We recommend that all customers read our warranty for details and conditions, which can be found at www.eagleroofing.com.

Disclaimer

Eagle Roofing Products concrete roof tile is made from natural materials and color variations are to be expected. Every effort has been made to ensure the colors in this brochure are as close to the actual roof tile; however, photographic and printing techniques can alter the printed colors shown, varying it from actual tile colors. In addition, colors are subject to change, as slight variations in color or flashing may occur during manufacturing. To ensure your satisfaction with the tile you chose from this brochure, we strongly recommend that you obtain a free tile sample from your Roofing Contractor, an Eagle Design Center or an Eagle Account Representative before placing your order.

Visit an Eagle Design Center

A beautiful roof is one of the most important architectural elements of a home or building. So why not visit an Eagle Design Center, where you can see our huge selection of colors, textures, styles and products?
