

Durable And Dynamic Support Designed To Protect

Eagle Roofing Products has partnered with our friends at Mage to provide you with the highest quality flexible flashing on the market. Cleverly created to withstand rain, wind, sun and snow, Secure Roll offers superior strength and protection you can count on.

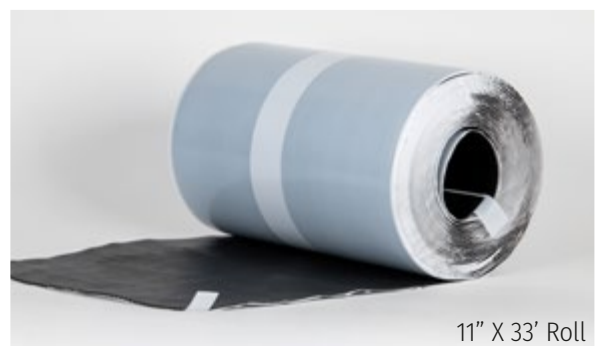

Application Instructions

Ensure that the surface the Secure Roll will be adhered to is reasonably clean and dry.

- Cut the Secure Roll product to a length that is manageable to handle. Take into account the number of people handling the product, jobsite conditions and the fully adhered nature of the product.
- Remove the release film from the side of the Secure Roll that will be adhered first.
- Carefully adhere the Secure Roll to the desired surface and press firmly to ensure full adhesion. For some installations, a silicone roller may make this step easier.
- As necessary on vertical surfaces, use mechanical fasteners to hold the Secure Roll in place.
- Lift the side with the remaining release film and ensure that the second surface is reasonably clean and dry.
- Remove the remaining release film.
- Carefully adhere the Secure Roll to the desired surface and press firmly to ensure full adhesion. For some installations, a silicone roller may make this step easier.
- When multiple pieces of Secure Roll are used to flash one length, the pieces should overlap at least 2 inches.

20" X 16.5' Roll

11" X 33' Roll
