DRYER VENT
BY **MARCO
INDUSTRIES™**

The Smarter Way to Exhaust Heat, Moisture, and Lint

Eagle has partnered with Marco Industries to bring you a high-quality Dryer Vent that will protect your property year-round.

The **High Profile Dryer Vent** safeguards your home by efficiently exhausting hot, moist air and lint outdoors. Sitting several inches above the roofline, it maximizes airflow while significantly reducing the buildup of highly flammable lint inside your attic. The perfectly placed removable cap allows technicians or homeowners to easily clean the duct year-round. Plus, its sturdy design locks out wind, driving rain, birds, and rodents—keeping your property completely protected.

Features

- Equipped with a removable cap for quick and easy cleaning
- Designed for fast, straightforward installation
- Made from high quality, resilient 26-gauge galvalume steel
- Offered in multiple finishes upon request
- Suitable for tile roofs, as well as shingle and metal

Benefits

- Removes hot, moist air and lint build-up from the dryer
- Zero water infiltration means no leaks, no wood rot
- Keeps out animals, insects and debris
- Durable design significantly reduces customer call-backs
- Certified to withstand up to 110mph wind

Choose Dryer Vents for cleaner airflow, easier maintenance, and cleaning.

Protect Your Home from Hidden Dryer Vent Fire Hazards

Did You Know?

Clothes dryer fires are a leading cause of home structure fires, and lint buildup is the #1 culprit. Standard roof vents trap lint inside your attic, creating a hidden fire hazard. The **High Profile Dryer Vent*** features a straight, smooth interior exit path that ensures proper airflow. By eliminating clogs, it drastically reduces the risk of fire and keeps your family safe.

- Minimizes the accumulation of highly flammable dryer lint inside the attic and roofline.
- Allows the dryer to exhaust hot, moist air efficiently meaning clothes dry faster—saving time and reducing monthly utility bills.
- Clogged vents means a dryer overheats and works twice as hard. A free-flowing roof vent prevents premature heating element burnouts and extends your appliance lifespan.
- Blocks wind-driven rain, birds, and rodents from entering the duct.
